

WALTER MOKWENA

GRADUATE IN AGRONOMY

8566 Pampierstad, Northern Cape | Mokwenawalter50@gmail.com | 0695469378

SUMMARY

I am a recent agronomy graduate with skills in, crop production, plant pathology, soil science, sustainable agriculture and research. My greatest strength is collaborating with people. I have a talent of solving complex problems, developing solutions related to agronomy. I am passionate about sustainable agriculture, empowering farmers and agribusinesses to find agronomic solutions that work for them. And most importantly i value, being collaborative, inclusive and having fun while i do it.

EDUCATION

Bachelor of Science in Agriculture majoring in Agronomy

Feb 2021 - Nov 2024

University of the Free State

- Major in Agronomy and Plant Pathology
- Grade average: 78%
- Thesis on "The influence of irrigation scheduling on contribution of root accessible ground water".

EXPERIENCE

Final Year Project, University of the Free State

feb 2024 - Oct 2024

- Investigated the impact of various irrigation schedules on the contribution root accessible ground water table.
- Managed different types of data such as climate, soil and crop data and analysis using software.
- Presented findings to professors at a seminar.

Glasshouse Trials on Herbicide Selectivity, Department of Agronomy, University of the Free State

July 2024 - Sep 2024

- Designed and executed controlled glasshouse trials to assess the influence of varying concentrations of herbicides (Basagran, Agil, 2,4-D) on the selectivity of Oats and Peas.
- Accurately calculated herbicide volumes required to develop specific application rates.
- Operated a mechanical applicator to ensure accurate and consistent herbicide application.
- Maintained laboratory records, ensured accurate measurements and data analysis.

Cultivar Recommendation & Crop Planning, University of the Free State

July 2024 - Sep 2024

- Developed theoretical fertilizer programs for cotton, maize, wheat and sunflower using soil analysis data to optimize nutrient management.
- Compiled a crop growth and development scale of selected crops and its requirements.
- Used the ARC guidelines to develop region-specific cultivar recommendations, aligning cropping systems, planting dates, and local conditions for optimal yield and sustainability.

Laboratory work, Department of Agronomy, University of the Free State

July 2024 - Sep 2024

- Successfully carried out research in glass house shelter
- carried out repetitive tasks such as irrigation, application of fertilizers, crop monitoring and record keeping
- Collected data including, number of leaves, plant height, plant bio mass and root mass
- Maintained laboratory records, ensured accurate measurements and data analysis

SKILLS

- Research and Analysis, Leadership and collaboration, Written and verbal communication, Problem solving, MS Office (Excel, PowerPoint, Word), Laboratory techniques, Attention to Detail.

LEADERSHIP AND AWARDS

- Volunteered to be a human rights ambassador for
- Recognized as part of the top 15 percent in my faculty by the Golden key society for the year 2021 and 2022
- I was awarded the top achiever in Physical sciences in the Northern cape NSC (2019)
